

Metabolic Therapies in Orthopedics, Second Edition

Edited by Ingrid Kohlstadt MD, MPH and Kenneth Cintron, MD

Table of Contents

Preface

Section I. Cross-cutting Technologies

Emerging technologies have direct impact on patients' musculoskeletal health and the treatment options health professionals can offer.

Chapter 1. Regenerative orthopedics enabled by cross-cutting technologies

Kenneth Cintron, MD, MBA

Chapter 2. Biotensegrity: How ultrasound diagnostics guide regenerative orthopedic therapies to restore biomechanical function

Bradley D. Fullerton, MD

Chapter 3. Dysfunctional foods: Food technology's adverse effects on the musculoskeletal system

Ingrid Kohlstadt, MD, MPH

Chapter 4. Lab technologies: Predictive biomarkers

Russell Jaffe, MD, PhD and Jayashree Mani, MS, CCN

Chapter 5. Veterinary medicine's advances in regenerative orthopedics

Jennifer Barrett, DVM, PhD

Chapter 6. Photobiomodulation: A technology with metabolic impact

Michael R Hamblin, PhD

Chapter 7. Emerging research on how energy frequencies influence musculoskeletal health

Aruna Bakhru, MD

Chapter 8. Human performance at terrestrial extremes: Breakthroughs ready for orthopedic practice

Ingrid Kohlstadt, MD, MPH; Andrew J. Young, PhD; and Kenneth Kamler, MD

Section II. Expanding the differential diagnosis and treatment options for musculoskeletal conditions

Personalizing medical care doesn't necessarily begin with additional testing. Commonly, opportunities to optimize the metabolism of orthopedics patients are identified in the history of present illness, past medical and surgical history, occupation and social history, medication list, physical exam, prior labs and imaging studies.

Chapter 9. Dysmetabolism underlying fractures and osteoporosis

Xaviour Walker, MD, and Joseph Lamb, MD

Chapter 10. Endocrine etiologies of muscle atrophy

Pamela Smith, MD, MPH

Chapter 11. Obesogenic sarcopenia

Gabrielle Lyon, DO

Chapter 12. Periodontal disease: Treating the hallmark of inflamed musculoskelature

David Kennedy, DDS

Chapter 13. Polypharmacy: Minimizing adverse effects on the musculoskelature

James LaValle, RPh

Chapter 14. The surgically-modified GI tract and restoring metabolic balance

Michael J. Gonzalez, PhD, DSc, NMD

Chapter 15. Sleep apnea's causative role in musculoskeletal pain

Joseph Z. Yousefian, DMD, MS

Chapter 16. Environmental contributors to musculoskeletal pain

Ritchie Shoemaker, MD, and Andrew Heyman, MD, MHSA

Section III. Metabolic therapies for specific orthopedic conditions

Clinical experts share cases and practice-ready recommendations on integrating metabolic medicine into orthopedic practice.

Chapter 17. Pre and post-surgery optimization

Frederick Sutter, MD, MBA

Chapter 18. Wound healing

Sharon McQuillan, MD

Chapter 19. Fascial syndromes

David Lesondak, BCSI, KMI, SST, LMT

Chapter 20. Muscle strain

Annie Cintron, MD, and Kenneth Cintron, MD, MBA

Chapter 21. Tendonopathies, regional pain syndromes and pain sensitization

David Musnick, MD

Chapter 22. Chronic back pain

Carrie Diulus, MD, and Patrick Hanaway, MD

Chapter 23. Synovitis and degenerative joint disease

John Cline, MD

Chapter 24. Osteoarthritis and post-traumatic arthritis

David Musnick, MD

Chapter 25. Autoimmune arthritis

George Muñoz, MD

Chapter 26. Metabolic approaches to the treatment of non-unions

Jacob Michael Wilson, MD, MCW; Mara Schenker, MD; and Scott D. Boden, MD

Chapter 27. Stress fractures among combat forces: A role for nutrition in prevention and treatment

James McClung, PhD
